DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 23-44 are rejected under 35 U.S.C. 103(a) as being unpatentable over 3GPP Technical Specification (3GPP TS 32.225 V1.5.0 (05-2002) (hereinafter 3GPP) in view of Lynch-Aird (6,240,402).

Consider claims 23 and 32, 3GPP teaches a method and system for charging for services in a communication system supporting a Diameter IP protocol, comprising receiving a request to establish an IP session from a user of the system; and initiating an account with an account controller of the system, wherein the step of initiating an account comprises a charging system, the charging system being responsible for monitoring of the account; the method further comprising establishing the IP session; and initiating the monitoring of the account (see chapter 6 pages 57-60 and 68-76).

3GPP failed to disclose of transferring sponsorship information to a charging system (i.e., allocating billing or charging to a party or a third party for the requested call). However, Lynch-Aird suggested such (see col. 2 line 43 – col. 3 line 24; col. 4 lines 53-67).

Therefore, it would have been obvious to one of the ordinary skill in the art at the time the invention was made to incorporate the teaching of Lynch-Aird into view of 3GPP in order for providing control of billing as well as providing the flexibility of allocating billing for calls.

Art Unit: 2614

Consider claims 24, 27-31, 36, 38-44, Lynch-Aird teaches the claimed features (see col. 2 line 43 – col. 3 line 24; col. 4 lines 53-67).

Consider claims 25-26, 33-35 and 37, 3GPP teaches the claimed features (see chapter 6 pages 57-60 and 68-76).
